

PRODUCT INFORMATION

ALKEM

Description

ALKEM is a cleaner for walls and external hard surfaces which removes moss and algae. ALKEM is based on organic acids, is safe to use and cleans without the risk of damage to surfaces.

WHERE TO USE

Suitable for many surfaces including:

*Brick *Concrete *Tarmac *Paving *Renders *Slate *Natural stone *Timber *Glass *Plastics

May also be used on greenhouses, play equipment and synthetic sports surfaces.

APPLICATION

Apply ALKEM when rain is not likely. Do not use in very cold conditions or where the surface is unlikely to dry after application.

Dilute with up to 5 parts water and apply using brush or spray so that surface is thoroughly wetted. Coverage is approximately 25m² per litre of concentrate depending on absorbency of surface.

Allow the surface to dry without washing off the ALKEM solution. Once dry the surface may be used normally. For lightly contaminated surfaces no further treatment may be necessary and the effects will be seen within a day or two. In more severe cases, dried material should be brushed away from surface or removed with a power hose. Where there is thick moss growth a second application of ALKEM may be needed.

ALKEM is not classified as a hazardous chemical but a good standard of occupational hygiene should be observed when handling the concentrate and solutions. Where the product is used on surfaces which may subsequently come into direct skin contact, *e.g.* picnic tables, garden and street furniture, playground equipment, etc., the surface should always be rinsed with water a few days after application when any residual material has dried out.
